
Pin map from YamuraHubV6.1 src/main.h. SD card: Teensy 4.1 built-in slot (SD.begin(BUILTIN_SDCARD)); display SD_CS not connected.

JP1 open by default: ST7796 SDO does not tri-state and would contend with the AirLift on MISO. A3 (Waveshare) includes a 120R terminator – hub is the bus end.

Teensy 4.1: cut the VUSB-VIN pad so USB and the 12V supply are not tied together. CAN = FlexCAN_T4FD<CAN3> on pins 30 (CRX3) / 31 (CTX3).

2-layer through-hole carrier: Teensy 4.1, AirLift, SN65HVD230 CAN board, 4in SPI display
